Footnotes

-, data not available.

(1) Marshfield Clinic and Ministry St. Joseph's Hospital (Marshfield WI) combined data.

(2) Ampicillin susceptibility predicted from a negative beta-lactamase test.

Gram Positive % Susceptible	<i>Enterococcus</i> sp.	<i>Staphylococcus</i> <i>aureus</i>	<i>Staphylococcus</i> , coagulase- negative	<i>Streptococcus</i> <i>anginosus</i> group	<i>Streptococcus</i> <i>pneumoniae</i> (1)

Footnotes

-, data not available or clinically unproven, or intrinsically resistant.

(1) Marshfield Clinic and Ministry St. Joseph's Hospital (Marshfield WI) combined data.

(2) Based on **meningeal** breakpoint of ≤ 0.5 mcg/mL = susceptible. Primarily penicillin non-susceptible isolates tested.

(3) Based on **non-meningeal** breakpoint of ≤ 1 mcg/mL = susceptible. Primarily penicillin non-susceptible isolates tested.

(4) Gentamicin Synergy, synergistic action is predicted when co-treated with a cell wall-active agent (ampicillin or vancomycin) and gentamicin **when the isolate is susceptible to both agents**.

(5) Oxacillin/methicillin suscep

(6) Based on **oral/meningeal** breakpoints of ≤ 0.06 mcg/mL = susceptible.

(7) Based on **non-meningeal** breakpoint of ≤ 2 mcg/mL = susceptible.
