

Informed Consent for Genetic Testing

and benefits are to having the testing completed. Refer to test specific information (general description of the test, purpose ar www.mayomedicallaboratories.com I hereby consent to participate in testing for I understand that a biologic specimen (blood, tissue, amniotic fluid, or choric	using a genetic test. onic villi) will be obtained from me and/or members of my family. mpting to determine if I and members of my family are carriers of the disease
It has been explained to me and I understand that:	
This test is specific for	
predisposed to or have the specific disease, or condition. Further testing may be needed to confirm the diagnosis. confirm the diagnosis. condition but that be negative. Due to and incomplete known changes in DNA or	that I will have this genetic the genetic test results will o limitations in technology owledge of genes, some reprotein products that cause be detected by the test. There may be a possibility that the laboratory findings will be uninterpretable or of unknown significance. In rare circumstances, findings may be suggestive of a condition different than the diagnosis that was originally considered.
 In many cases, a genetic test directly detects an abnormality. Molecular testing may detect a change in the DNA (mutation). Cytogenic testing 	 An erroneous clinical diagnosis in a family member can lead to an incorrect diagnosis for other related individuals in question.
may identify whether there is extra, missing or rearranged genetic material. Biochemical methods are sometimes used to look at abnormalities in the protein products that are produced by the genes.	 The tests offered are considered to be the best available at this time. This testing is often complex and utilizes specialized materials. However there is always a small chance an error may occur.
Most tests are highly sensitive and specific. However, sensitivity and specificity are test dependent.	Because of the complexity of genetic testing and the important implications of the test results, results will be reported only through a
 When a direct test is not available, the laboratory may use a method called linkage analysis. Linkage analysis is not as accurate as a direct test, but will report the probability that you or a family member have inherited a disease or disorder. In some families, the markers used in linkage analysis may not be informative. If this is the case, the DNA 	physician, genetic counselor, or other identified health care provider. The results are confidential to the extent allowed by law. They will only be released to other medical professionals or other parties with my written consent or as otherwise allowed by law. Participation in genetic testing is completely voluntary.
test cannot provide results for that family, or for some members of that family.	clinical studies. I understand that my specimen will only be used for the
 The accuracy of the test depends on correct family history. An error in diagnosis may occur if the true biological relationships of the family members involved in this study are not as I have stated. In addition, 	genetic testing as authorized by my consent and that my sample will not be used in any identifiable fashion for research purposes without my consent.
testing may inadvertently detect non-paternity. Non-paternity means that the father of an individual is not the person stated to be the father.	 Additional testing information can be found at: www.mayomedicallaboratories.com
Signatures	
My signature below acknowledges my voluntary participation in this test. I understand that the genetic analysis performed by Mayo Medical Laboratories is specific only for this disease and in no way guarantees my health, the health of an unborn child, or the health of other family members.	
Patient Printed Name	Birth Date (Month DD, YYYY)
Patient Signature	Signature Date (Month DD, YYYY)
Witness Signature	Signature Date (Month DD, YYYY)
I indicate my desire to opt out of participation in anonymized research studies using my DNA sample by initialing here Receipt of this document ensures that my specimen will be destroyed upon completion of the testing for which it was obtained.	
Physician's or Counselor's Statement: I have explained genetic testing (including the risks, benefits, and alternatives) to this individual. I have addressed the limitations outlined above, and I have answered this person's questions to the best of my ability.
